Abstract

Background and Aim: Basketball has been popular in China for a long time. The essence of basketball is a talented athlete. Systematic team play the management of the person in charge or executive must be professional. It is therefore important to study the development system of basketball organizations within China. China wants to develop all kinds of sports as a result of the development of the whole system to improve the country's reputation. Despite basketball's popularity, there is a lack of comprehensive managerial models tailored to elite teams in China."

Methods: Employing a Delphi method, we consulted 21 experts across five domains to predict and develop a managerial model for the 2024-2034 decade

Results: The results of the research found that 1 study of the development of the basketball management model for the next decade meets the objectives, which are reported as a subsection of the model for each aspect of the study, namely planning, organization, practice, and the control is by the objectives and the consistent opinions of experts. 2 Results of the creation of a model for the development of a basketball management model (next decade), a group meeting was held to confirm the model according to the principles. POIC theory is planning aspect, organizing aspect implementing aspect, and controlling aspect.

Conclusion: The developed model outlines critical areas for development, offering a strategic roadmap for elevating the professional management of elite basketball teams.

Keywords: EDFR; Pattern Creation; Managerial Model; Elite Basketball Team

Introduction

Basketball has been popular in China for a long time. This sport is popular both inside and outside the country. although it was not a traditional sport in China before, but is liked by all people, whether players, spectators, or coaches. Basketball is a sport that competes all the time as a way of organizing according to the system laid down for the private sector and government which the competition is career and amateur. The nature of the amateur competition often occurs in educational institutions in general, which are compulsory for organizing a curriculum in terms of systematic and curriculum teaching. At the end of each academic year, the results are summarized by organizing a competition for students to show their desired abilities. and to relieve stress from studying This is a very good result because students have a lot of interest and interest and seriousness. Because sometimes students think that it may be a foundation to play professionally in professional basketball, it is possible. If this student has the ability (Wang, 2019)

At the same time, there is development in terms of management, organizations, or associations involved to develop the basketball organization of the country to progress towards a professional level. base Therefore, the organization and player development management has been carried out, especially the players must be highly competent in all abilities. Those who are ready to become professional basketball players must be highly competent in all aspects, such as skill development for playing. physical development in nutrition and developments in health care the rest that must be sufficient to become a true professional by focusing on the skills of playing fitness. the mental performance that the body of a basketball player must have (Xu, 2020)

The essence of basketball is a talented athlete. Systematic team play the management of the person in charge or executive must be professional. To enter the competition there must be a victory. The work that comes out makes the organization happy and successful. everyone was satisfied but until then, the organization in charge of the system management organization must analyze and build faith. For serious management principles to be accepted in management skills, executives must focus on the athletes who must have perfect quality in all aspects. As for the athletes themselves, they must understand themselves and be aware of How to do yourself according to the principle of self-improvement to help the other side of the organization (Feng, 2019)

As for the organization, it must focus on the development of the system, namely the management that must be ready to cope with developments and changes in all aspects, whether in terms of budgeting, or personnel management within the organization. Revenue Management Department public relations department competition management management finds a source for skill testing. Development Technical Department, therefore. the organization must develop the organization systematically by relying on theoretical principles and consulting professional management experts in carrying out these matters. Therefore, the management of strategic planning has become an important issue of the organization, including organizations, must have an external person or an external agency to be a consultant, and organize both the organization and athletes at the same time. Especially in the part of athletes who must have a plan to develop their skills systematically. (Hidayat, Komarudin & Martini, 2021)

It is therefore important to study the development system of basketball organizations within China. Because China wants to develop all kinds of sports as a result of the development of the whole system to improve the country's reputation. Therefore, in each organization of basketball, it is necessary to develop into the goals mentioned above. Organizational development that is necessary and important in part is the development of a competitive basketball team. The development of an organization's basketball team to build credibility for society, people and the country has become necessary. Therefore, the development of a basketball team for competition preparation is not an easy task to carry out, and the agencies or organizations are quite ready in all aspects, especially the preparation of financial, budgeting, and skilled coaches. Athletes who are ready Building conditions that must be of good quality The efficiency of the facilities is sufficient to make the development of the Chinese basketball organization or association so effective and able to make the basketball organization develop as intended (Wang and Li, 2016)

Studying the problems and needs of team development for competition management is therefore very necessary. The researcher has studied articles and documents related to team development for competition organizations. Research studies research from theory Consultation from experts on matters related to the development of a systematic preparation model for the Chinese Basketball Association. The researcher is interested in studying and researching to find knowledge and methods to be applied to develop a basketball team preparation model for the competition to achieve the objectives that can be put into practice on any occasion.

Objective

1. To create a format for preparing teams for Competition.
2. To study the preparation of teams for competition.

Literature Review

Planning

Planning is the setting of goals established as a result of the influence of personnel within the

organization or from the influence of the external environment and other conditions or management systems by searching for ways or opportunities that will allow the plan to be carried out. To be at this stage the planner must Gather necessary information and facts allow all parties within the unit to fully express their opinions, and combine that information and opinions with the available resources. A forecast of future changes can be provided by translating opportunities into step 2 as a guideline for operations and the weaknesses of the plan must be identified and carefully considered. The management will work at this stage with rationality. In summary, setting specific goals requires dividing tasks according to specific functions and expertise and setting specific objectives. This step will help all personnel know how to proceed and benefit after the plan is completed. (Bridges and Roquemore, 2019)

Organizing

Organizational organization is the coordination of the process that must be provided with friends at every stage of the administration. It also helps to combine the factors in the administration to be harmonious. Organizationalization is an important administrative process that organizationalization will help. benefit as follows: Helps work to achieve goals smoothly and quickly. Save in regards to time and cost. create a good understanding both inside and outside the organization Help build morale for employees, prevent duplicate work, all parties must understand the duties of the job, must understand the principles and methods of working properly well. (Bateman and Snail, 2011)

Implementing

The Principles of Leadership is a process in which a leader helps to make it clear to subordinates what is important, to give a clear picture of the organization's reality to others, and to see direction and purpose clearly under change. quickly, Therefore, the leadership principles can be summarized as follows. The practice of leadership is the focal point of group work in seeking the cooperation of individuals in the group to lead the group towards its goals of success. The leader's leadership as a personality and the effect of personality on the follower in working together create satisfaction or dissatisfaction with the leader's personality as a result of leadership itself. The leader's actions or behaviors as a result of having leadership influence the reaction of the leader to what the leader does if the leader makes the follower follow, too. Leadership, therefore, is an important driving force that helps to motivate and coordinate the organization of the group, primarily a role that arises from the integration of the roles of others. To create progress for the social system each organization or the organization has different roles, but all duties help develop prosperity for society, therefore relying on leadership. (Bridges and Roquemore, 2019)

Controlling

Good control principles will ensure that operations are carried out following established plans and standards and will help keep work efficient. Controls to meet the criteria require modifications that differ from the criteria as part of the integrated system of management and other management functions. Management can address this discrepancy by adjusting plans or adjusting goals, reassigning tasks, clarifying responsibilities or increasing staffing, recruiting, retraining subordinates who are re-staffed, or maybe fixing it with a better implementation. More effective job descriptions and techniques and leadership. (Bridges and Roquemore, 2019)

Conceptual Framework

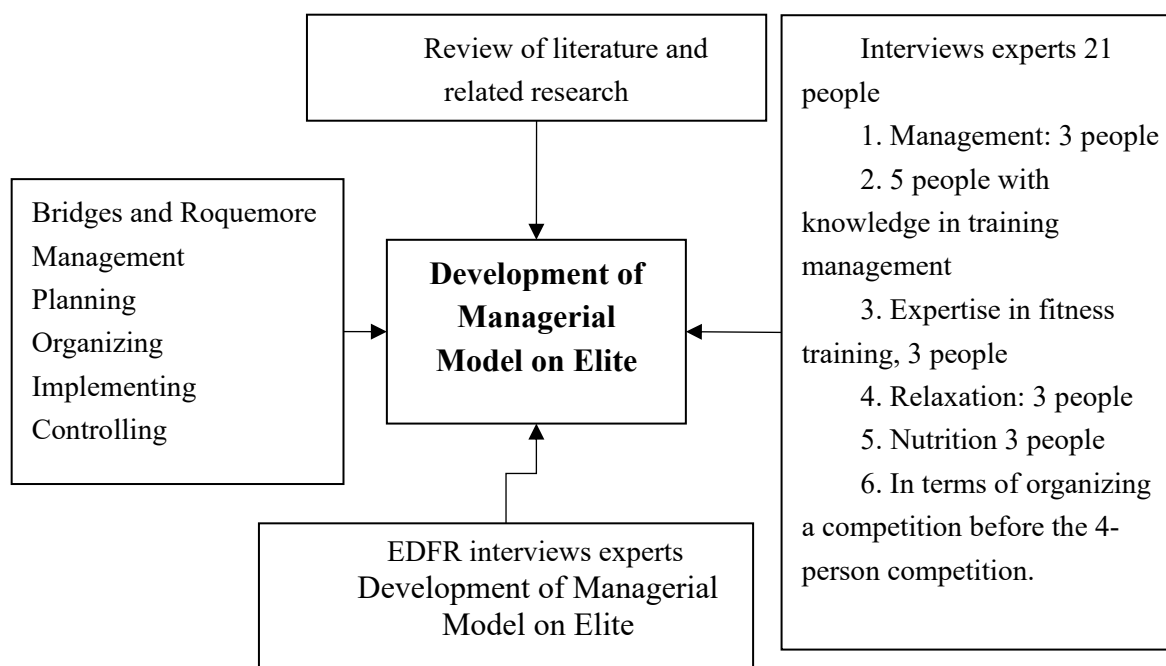

Figure 1. Conceptual framework

Methodology

Population and sample

1. *Population*: The population is a qualified person who has management of the association who has management knowledge. People with knowledge of fitness training nutritionist knowledgeable in training There are 21 experts in tournament management.

2. *Sample group*: Analyze the management model in team preparation for competition by using the EDFR technique to answer the question of the research

2.1 Summarize the management variables in team preparation for competition derived from the synthesis stage.

The first round used an interview framework that used structured interview questions to consult with a total of 21 expert experts using a purposive sample selection to select experts to meet the goals set. put it

2.1.1 Experts who are in basketball association Management 3 persons

2.1.2 Experts who are training 5 persons

2.1.3 Experts who are capable of Physical Fitness training and fitness training 3 persons

2.1.4 Experts who are talented in relaxation and meditation 3 persons

2.1.5 Experts who know about nutrition 3 person

2.1.6 Experts who have the Tournament Manager 4 persons

3. Scope and Limitations of Research

3.1 Scope of Research: This research studies the development of a basketball team management model before a competition.

3.2 Limitation of Research

Because the research is to find a form of preparation for preparing teams for basketball competitions, which is conducted before the competition, the form must be obtained from interviews with experts. 21 people related to experts who can manage the association, 3 of whom are the current president of the association and 2 presidents of the association who have resigned from their position, who are experts In terms of creating training exercises, 5 people, 3 experts in fitness testing, 3 experts in relaxation, 3 experts in nutrition, and 4 people's pre-competition experts therefore have limitations in the form obtained from these experts who hope to be indicators and keys to strengthen the association. There is strength in preparing teams before future competitions that will result from this research.

Research Tools

Research Tools the Research tools for collecting data in each step were as follows:

Step 1 Study of management variables in team preparation for competition using documentary analysis. Theories and concepts in research analysis and literature summary related to training management, body skills, nutrition, tournaments, and training for both domestic and international competitions to obtain conceptual variables. It is a summary of the variables that have been synthesized into an article that presents the researcher's concept and uses it as a basis for informing the experts about the management style for preparing the team for the competition basketball

In step 2 the analysis of the management style in team preparation for the competition of the Basketball, the researcher used EDFR research techniques. From the interviews with 21 experts, the tools used to collect data were as follows:

2.1 The first round of interviews with EDFR experts was structured interviews developed from article summaries from Step to create a structured interview form. The structure is then built into an end.

2.2 Interview with the same set of experts. The second round of EDFR used a closed-ended questionnaire, a 5-point Likert scale, which was developed from the results of the first round of EDFR interviews. Then developed into a questionnaire on the feasibility of the management model in team learning for competition, with the original set of experts confirming their opinions by adding the positions of the median and interquartile ranges. tiles for each luminary to consider the answer.

2.3 The third round of EDFR interviews was conducted using a closed-ended questionnaire with a 5-point Likert rating developed from the results of the second round of EDFR interviews. The Delphi research was then developed into a questionnaire on the feasibility of a management model in preparing teams for competition by the original set of experts to confirm their opinion by adding the position of the median and the range between Quartiles for each expert to consider the answer.

Creation and development of tools

For research to be able to measure by the conceptual framework of the research and to achieve the objectives laid down, the researcher then defined the steps in constructing and developing the tools as follows:

Step 1 Study and analyze documents from theoretical concepts. and related research both at home and abroad on the management style in preparing the team for the competition of the Basketball was then synthesized and prepared a summary article on the variable concepts of prosecution in Preparing the team for the competition of the Basketball.

Step 2 Creation of a tool to interview experts with the EDFR technique to obtain a model and management guidelines for team preparation for the competition Basketball, proceeding as follows:

2.1 Create a structured interview form to present to the advisor for consideration

2.2 Take the structured interview form that has been approved by the advisor and interview 21 experts using the EDFR technique/for the first round. Draft results for the management of team preparation for the competition of the Basketball.

2.3 Create an EDFR interview form by analyzing the results of the 1st round of EDFR interviews dividing the data into groups and developing a questionnaire asking for opinions about the feasibility of management in preparing the team for basketball competitions. The questionnaire created in the second round was a closed-ended questionnaire with a 5-level Likert estimation scale and submitted to the same set of experts for comment. The results from the second round of EDFR were presented. Group data were analyzed by finding the median and the range between death of the group and in the third round, the same procedure was performed as in the second round. The original set of qualifications concluded that the results from the 3rd round of EDFR were used to analyze group data by determining the median and interquartile range of the group.

Tool Quality Check

Interview-based quality chests and data confection tool round of EDFR data collection was conducted by taking the interview form created according to the advice of the advisors and experts to allow the advisors and experts to check the content validity. The index of item objection congruence provides additional suggestions to improve and adjust to be suitable, then brought to interview with experts.

The opinion questionnaire used in the second round of EDFR data collection was examined by using the questionnaire generated from the data obtained from the first round of interviews with the advisor and the experts for validation. According to the content and validity Index of item objective congruence provide additional suggestions for improvements as appropriate, and then lead the experts to complete the original set of opinions.

Data Analysis

In analyzing the data and the statistics used to analyze the data are as follows.

1. Analysis of data from studies, documents, and related research using content analysis
2. Analysis of data from interviews with 21 experts from the Ethnographic Delphi Futures

Research technique used mindfulness as follows:

1) Data obtained from interviews Twenty-one experts from the 1st round of EDFR were used to analyze data by content analysis.

2) Centered is the median, the mode, and the distribution are the interquartile range, details are as follows.

3. Analyze the data with the median as the value of the data in the middle of all the data obtained to analyze the data from the 5-level questionnaire according to Likert's rating scale.

Level 1 means the experts least agree with the statement,

Level 2 means the experts slightly agree with the statement,

Level 3 means the experts moderately agree with the statement,

Level 4 means the experts agree with the statement. That's a lot,

Level 5 who agrees with that statement the most?

A median less than 1.50 means the experts agree with the management approach for preparing the team for the competition of the Chinese Basketball Association.

Median 1.5 0 - 2.49 means the experts agree with the management approach in the team preparation for the competition of the Basketball is less.

The median of 2.50 -3.49 means that the experts agree with the management approach for the preparation of the team for the competition of Basketball.

Median 3.5 0- 4.49 means the experts agree with the management approach for preparing the team for the competition of Basketball.

Median 4.5 0-5.00 means the experts agree with the management approach for preparing the team for the competition Most of the competitions the Basketball.

Results

The researcher was able to summarize the research results according to the research objectives that the development of basketball team management models for the next decade has guidelines based on the attitudes and opinions of experts according to future research techniques, and EFR techniques.

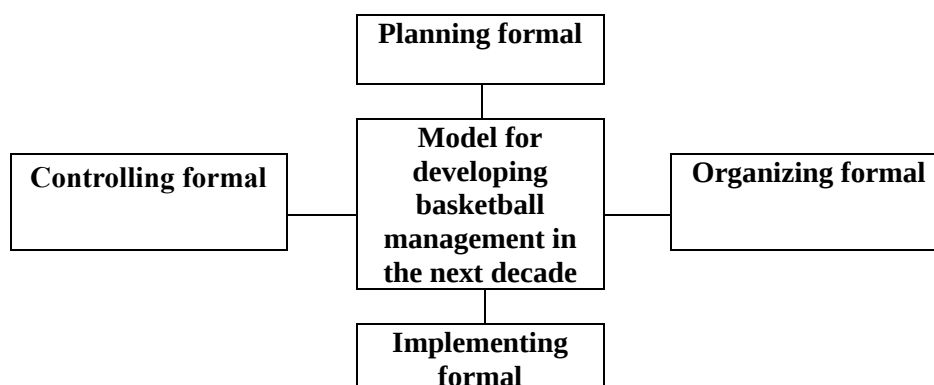

Figure 1 Model for the development of basketball management in the next decade

1. Planning

Planning formal		
1. Planning to apply the principles of SCH Weyer's (2014) talent theory to develop basketball teams in the next decade.	7. Planning to build our industrial factory for producing basketball-related equipment is extremely necessary in the next decade.	13. Physical fitness testing of athletes must be carried out by experts and be specific to each player's position over the next decade.
2. Incorporating research into basketball team development planning can be formulated into policy. Decision objectives Strategic planning for the next decade	8. Planning for training must be diverse to compete with other teams	14. Athlete nutrition planning will need to be implemented over the next decade.
3. A decade is necessary because requires planning for physical fitness testing of athletes using information systems. Using computer programs and using technology Modern information in the next decade	9. The next decade of planning regarding the welfare of athletes according to their rights must be systematically organized over the next decade.	15. Decades, tournaments are necessary because they need to be transformed into tournaments that test playing methods and test athletes.
4. Planning for appropriate relaxation, meditation, and visualization exercises	10. Coaches must plan for athletes to know how to build their skills, reputation, and self-worth over the next decade.	16. Planning for relaxation, meditation, and visualization will require a clear training schedule and guidance from medical professionals over the next decade.
5. Planning to create the association's Academy is a method for developing basketball that requires systematic continuity and is very necessary for the next decade.	11. Executives must plan to develop a management style for basketball teams over the next decade using strategic plans.	17. Planning to use sports science principles to improve training and competition over the next decade.
6. Planning to make MOUs with other teams in practice Experiments in competitive knowledge exchange between executives will need to be conducted over the next decade.	12. Planning the training methods for basketball athletes' competitions requires position-specific training experts over the next decade.	

Figure 2 Model for the development of basketball management in the next decade

2. Organizing

Organizing formal		
1. Associations must organize a personnel structure in terms of welfare provision to support personnel and relatives of athletes who will need to provide care and assistance over the next decade.	9. Organizations must set up research working group to study research specifically on basketball teams because the research results can be used to develop the organization over the next decade	17. When an organization grows and becomes famous, it will need to organize marketing and distribution departments over the next decade.
2. Organizations of associations must build a basketball team to be successful in competition, earning income and prizes to support themselves. After that, they can expand their business over the next decade.	10. Building an industrial factory producing basketball equipment is appropriate and consistent with the principles of developing a basketball team management model, especially if the next province	18. The management format for basketball must consist of the president of the association as the highest executive, dividing duties into each department to take responsibility for each person's duties for the next decade.
3. The organization must have a working group for searching athletes specifically responsible for searching from the academies of other associations or the White Elephant Project or granting scholarships to look after them while they are at other institutions. There must be someone responsible for analyzing next. decade	11. Associations must provide exercise facilities, swimming pools, karaoke, and steam massage facilities as relaxation for basketball players over the next decade.	19. Organizational principles must rely on experts who have knowledge and ability in management, arranging exercises, physical fitness testing, in organizing relaxation, meditation, and imagination. Nutrition and competition for the next decade
4. Training must have an analyst to see if the athletes can play according to the style the coach has taught or not. If not, new training must be adjusted.	12. In the next decade, the association must have a library for researching information technology systems and a computer institute for searching for knowledge of athletes.	20. The organization must have a model manager, a manager who can coordinate within the organization with the training department, testing department, winning department, thinking department, training department, measurement, and evaluation department for the next decade.
5. The academy of the association must be a source of producing quality basketball players, trading, and generating income for the association over the next decade.	13. Associations must organize a personnel structure in terms of welfare provision to support personnel and relatives of athletes who will need to provide care and assistance over the next decade.	21. The organization must have a working group, an activity organization department, a study tour department, an organization development department, a thinking and design training department, an analysis department, a synthesis department, as well as academy management to help with operations in creating a model. of the organization being successful in the next decade
6. Establishing the association's gymnasium has the benefit of being used to test athletes as a training ground and competition field in the next decade.	14. The association must pay attention to the resting context of basketball players. It is necessary to provide a place to relax, practice meditation, and practice imagery, along with experts to provide training and knowledge in the next decade.	22. The organization, when it has developed to the point of prosperity and is well known, must publicize contacts to advertise to everyone and be able to come and work for the organization at any time.
7. Principles of Placement for Athlete Nutrition will emerge in the next decade.	15. The association must have a working group to oversee the behavior of athletes, both good and bad. For good behavior, bonuses must be considered. For bad behavior, there must be training, teaching, and punishment.	
8. Association executives must develop the basketball team to a professional level to progress and build the association's reputation in the next decade.	16. The organization must set up a working group to take care of the orderliness of the entire organization so that the organization can manage its basketball team to become famous. There must be a unit to take care of security in the next decade.

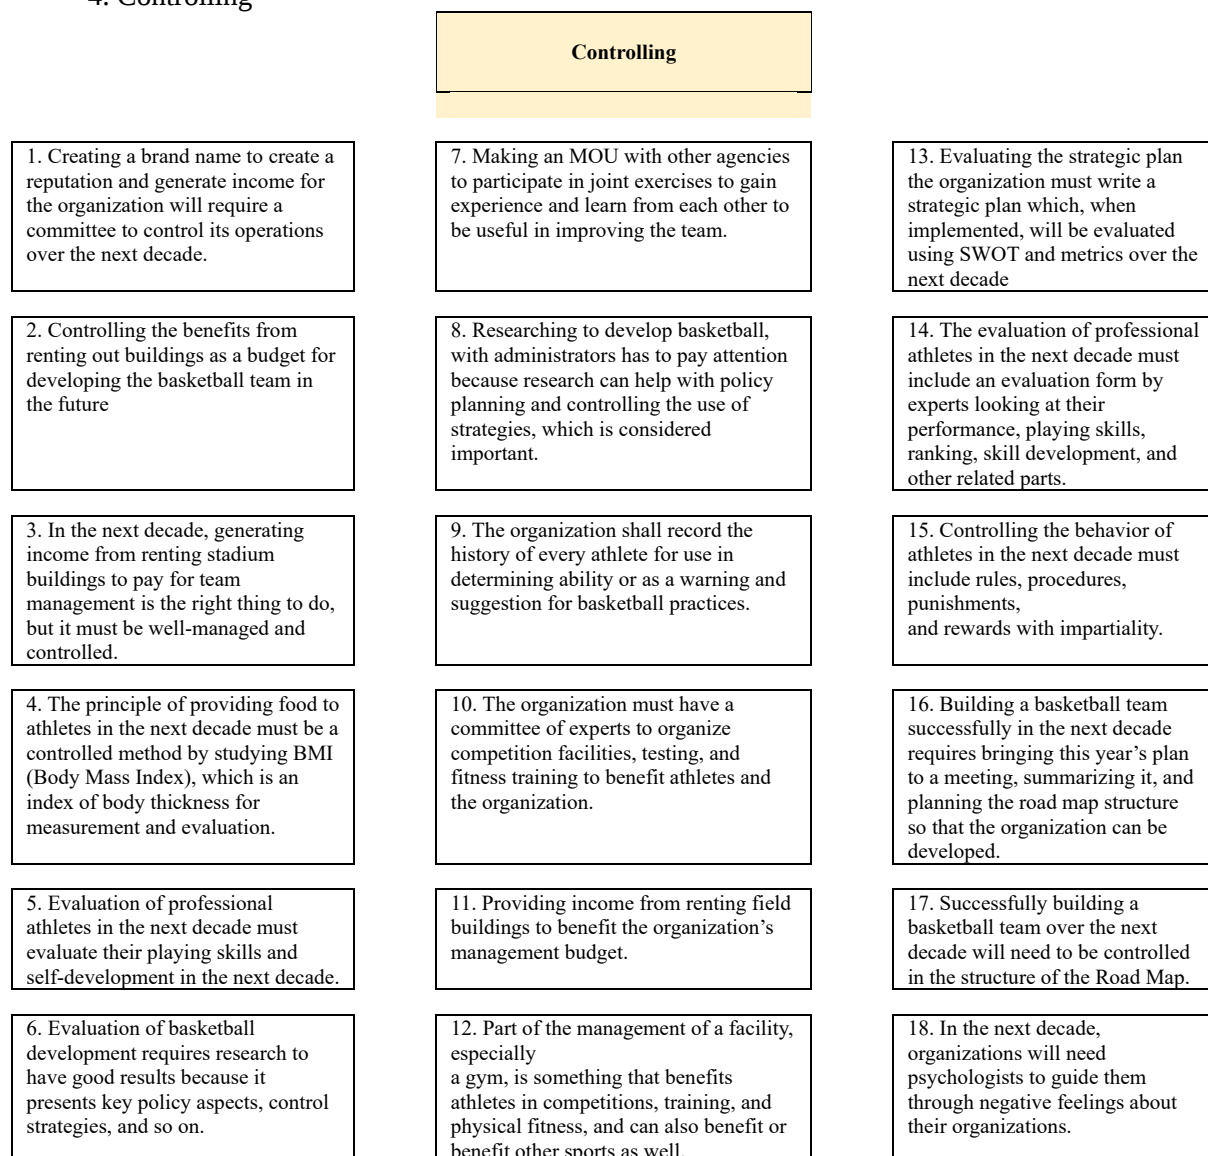

Figure 5 Model for the development of basketball management in the next decade

Discussion

The findings from this research have been discussed by the researcher to summarize as a model for the development of basketball team management in the next decade. Therefore, developing a model for basketball team management in the next decade means Managing a basketball team over 10 years, showing a process that includes four areas of management: basketball team management, planning, organization, implementation, and management. Controls with details as follows:

1. Basketball team management in the next decade. Planning has issues to consider in implementing the process in the next decade. Characteristics of planning using the Beyer 2014 theory is the theory used in student selection because student selection is It is necessary to select talented students to study at universities in the organization of basketball. There must be a plan to present research results because research results can be published to bring out the essence of research, such as the application of planning, application of strategic planning, application of problem-solving, and application of management in the form of operations in the next decade. Those who are athletes must know information, innovation, computers, notebooks, and more. The development of basketball is a development that is hoped for so that students can use it to their advantage. Playing sports is not a

commitment. For only winning but also striving to practice good sportsmanship. Playing sports is not only striving for victory but is also a practice of sportsmanship. Related research has been studied on the subject of sports training, which is linked to the true practice of each person. Therefore, when we plan to play sports, we will feel that we are as committed as we think. But for us to be successful, we must apply research principles that affect the study of concepts to provide ideas. In terms of our sports, it can be practiced and possibly like the concept of Related to the matter of sports, if we have practice or adhere to good principles, we, if we are unable to follow Reading the objectives as you can tell, will not bring happiness. Therefore, research plays a part in helping us to carry out the objectives of the sport from that research consistently. That has been said. Max (2016) that has been said I have studied research that aims to create a skills test for high school students to test their strength in shooting basketball. From this research, research on the strength of the core of the organs that the research study can be applied to. It is used as an example to synthesize research on body strength training similar to research on core strength training. Therefore, it can be seen that research plays an important role in every subject that can be used. Mentioned above in terms of playing basketball to build strength. The basketball association must plan for development by thinking of creating an academy to produce sustainable basketball players. Having these things shows that the association places great importance on wanting to develop the organization to be able to live in society and for people to accept what people can accept we must connect by creating an MOU. MOU is very important in this era because we cannot be alone. We must help each other. The nature of living and relying on each other, think about it. That To live in society, one must have a beautiful mind and understand the current situation as it has changed. We must be mindful to be happy, which is consistent with the idea of meditation practice. Have a confident mind In line with the concept of Kang (2014) conducted on the mental training of basketball players. This research aimed to compare the mental training of children aged 15-17 years in provincial basketball sports in China to study the effect of mental training on having Concentration, a calm mind, ability to score goals well or not. The results show that children who train their minds have good members who can score goals, thus suggesting that good mental training is stable and can be used. with the basketball subjects of the players. Therefore, the creation of the organization's basketball sports model has a Thai concept similar to the aforementioned research that can bring the results of the basketball subjects to be used in the next order. Planning research summary the results of the research in planning the future development model of basketball appear as presented and compared with the research from the results of the planning research presented as presented.

2. Organizing Management of the development model for basketball in the next decade in terms of organizing has 22 issues to consider from experts as follows: The organization must have experts matching their abilities and must have the feeling that to solve the problem according to the organization's model, create a model with skills and training styles from easy to difficult. You must know how to divide the management of basketball organizations in the next decade. There must be two organizational issues. The first point is that there must be able to govern and mold the hearts of the athletes involved in the circuit, to create good feelings for the athletes, not just the athletes themselves, but also at the same time, there may be other reasons that must be a matter for administrators to decide, such as experts pointing out the issue of athletes who are present and likely to feel discouraged and uncomfortable from the system. If you are in management or famous and want to leave the organization, you will not feel warm. Therefore, one psychologist must be arranged to take care of you according to the principles of organizational management because the athletes who come there will feel that It's not good if there is unfair governance or care that will cause suffering. Therefore, administrators will have to use psychology and mediate to teach them that being an athlete requires research on mindfulness training and mental training. The idea of the administrators is that administrators must have vision, know how to analyze and synthesize in observing athletes, and give encouragement at the level of building morale and encouragement so that the athletes can be mindful and mindful in practicing concentration in their work, in line with the concept of Yang (2017) said that training the morale and morale in the field trials of 21 provincial junior athletes in cycling training must be practiced with a meditation recovery process. It was found that meditation can reduce the factors that cause Stress can be fully reduced and anger fatigue reduced, and confusion reduced, which we think is positive energy. Therefore, this research encourages basketball organization administrators in the next decade to have to go deeper to take care of athletes in their entire condition. body and mind as in the aforementioned research. The project management concept of the organization is that the organization must build credibility with society, especially by creating an educational situation, and an academy for society to accept that this organization intends to create basketball players, so the idea was to set it up as a school. Fully integrated, there is a top executive to take care of student coaches who can select. Therefore, the

most important thing is that there are experts in the matter of coaches who must take care of screening. It is considered a very important matter in the organization of clothing, shoes, and other things related to basketball, which is considered complete. It is a management policy or strategic plan for creating a management model for basketball teams in the future, which is a good idea consistent with the research that has been done. As the administrator is the highest executive, they must have a view to management in governing and taking care of athletes in selecting athletes to enter the institution, where each athlete has a different concept, body, and mind. Therefore, Executives must know how to manage differences so that they can survive because if differences are compared, they cannot survive, thus causing problems. The analysis of differences should come from the example of this research as follows. Yu (2016). It is said that the creation of a swimming training model using a freestyle swimming model for students aged 10-14 years is a model for swimming training with young students using models and methods from A total of 17 experts from the trainer's idea. The results show that therefore, from this research example, we must not look at the issue of individual differences as a problem, but we must solve the problem by looking at the age difference of the swimmers that the coach has created, for example. It is new and solves the same problem as the research on the development of takraw sports that requires bringing in people who are different to organize or divide it so that every pair can live from it. That difference is the ability of the top executive.

Summary Therefore, the research that supports organizing is the organization's basketball sports development model for the next decade will probably have management methods of top executives according to the principles that experts have recommended, all 22 variables, which Can be arranged and modified for use on future occasions as mentioned above.

3. Implementing the management of basketball teams in the next decade has 22 factors that experts point to, emphasizing that the coach must be a practitioner who must go deep into creating Training exercises in taking care of recruiting athletes and must be able to compete at the beginning. This means that there must be a team to summarize the principles of practice such as management by the picture. The type that you want to organize content, organize places, organize things about people. The results of this study were to study the effects of relaxation imagery training on heart rate variability of 30 Chinese provincial club basketball players, aged between 35 and 31, who were purposively selected and volunteered. When the results of the imagery training and relaxation experiments were combined, the results showed that during the week the heart rate variability was measured before and after training. When compared between the experimental group and the control group, it was found that there was the reason is different because comparing research with research values is incomplete research and the result cannot be used. However, if the research is complete, it means that there will be less stress when the research is used. To practice these things is very appropriate that the research will help or cream the development of a basketball team management model that has results and success, based on the principles of research and in sequence, next the practice of developing a management style for takraw teams over the next decade will require modern communication with information technology systems, which will make communication better. organizations will have to devise guidelines for building factories. To produce an industry that when closed can provide services to our athletes by using equipment that can be installed and sold as well. For that reason, we must have a basketball team, if we have all the elements, it will make it. Easier for government administration in the form of organizing competitions. Those who have the ability, namely trainers, will have to find good training models that train hard. There are many types and styles to present and then analyze them according to which type. Well, experts have advised on the issue of welfare that guidelines must be disbursed to athletes correctly, thoroughly, and without bias. Another method of arrangement that is thought to be useful is the arrangement. The principles of food preparation for athletes, it is important and, in the future, must be implemented in team management. The regulations must give ideas on how to live together and be a team in practice. Strengthen concentration training, and mental training using the information system as an aid and must find index values for the practice whether it is good or bad. If it is not good, there must be development. There must be a strong team organization. Must practice. Compete a lot. You must create a training plan for everyone to be aware of. You must search for skilled athletes. You must know how to create athletes, physical fitness, and rest by giving value to athletes so that they can develop and become good athletes. The next organization Principles of training in practice regarding hard training, which represents the training of the strength of the athlete's body. If there is strength, it will make the body strong and able to compete and practice very well, which has According to his research, research on physical form and core strength training an important factors affecting basketball shooting based on the belief that core strength is an important factor. The success rate of individuals scoring goals shows that the research used to support the strength of the training model for the

development of basketball team management of organizations can be used to bring research into comparison. Very well from what has been explained in the overall picture of Infinity, which is a summary

of the internet according to the principles of academic experts who have presented that practice must rely on real principles. Practical people must do it for real. And with accurate measurement, research can be used and adapted as mentioned above.

4. Controlling basketball team management in the next era, there are 20 points that experts have pointed out. In the Conjuring area, there must be improvement in the competition in the next decade. You must learn about the subject. The equipment for measuring and evaluating each time, whether it is a matter of strategic plans, must be done with swot and not stuck to see clear results in evaluating small activities that are performed must rely on the principles of evaluation using the PDCA method. Principles for searching for athletes must use theoretical principles. is the principle of finding athletes in the sense of management in the next decade. In the principle of control, there will be two types of control: control in a normal manner and control with evaluation, that is, evaluation which will It is an emphasis on evaluation. For example, when we evaluate food, we have the principles of BMI Body Mass Index. There is a principle for measurement and evaluation according to the control principle, which must produce results. As for control, which must produce results, that is, doing research. Research work can be used as a deciding factor in an evaluation because to say that doing research is finding results is evaluating results. Methods in the next decade will need to be developed regarding control of evaluation using the principles and methods of information systems technology. Essentially, for modernity to occur, there must be a measure of ability, a qualitative measure, and a quantitative measure with the academies or schools that we will create to create accurate and strong basketball players. Therefore, in dealing with the matter The Academy must have elements that we must measure in many ways, such as bringing in the principles of sports science to measure and elaborating on control and evaluation using research methods as follows. What must be involved in the training of basketball players is skill training, no matter what skill it is. When we train to the main point, we can do it, as has been presented in the ceremonial format regarding the subject. of skills training with research supporting the skills of Duangnapha (2011) is about the situation of vocational education in the next decade between 2011 and 2021. The research aims to study the situation of vocational education in the study. Work in the next decade. The results of the study say that vocational education in Thailand in the next 10 years will have to face many important issues such as globalization. The trend will be compared to high competition. The community will have to catch up with new systems. This is a method of education by using the skills of vocational students in the field of training in career procedures. example Chickpurich Strategic Plan Research 2014 Research has been done on the model of strategic change in the organization of national sports organizations. This research aims to understand the nature of strategic change in the organization of national sports organizations. The objectives are divided into 3 parts, 1 is part Independent, and unrelated is a review of the study of the role of all documents regarding the structure of sports which indicate the value and structure. The third point is that the format of national sports is mainly based on of the model for creating management specifications. The results of the research study show that the strategic plan obtained from the research can be put into practice. Therefore, it can be concluded that the strategic plan is one of the factors that can be used in Creating a Management Model for the Development of Basketball in the next decade.

Conclusion

From the research on the development of basketball team management models in the next decade, findings were obtained that are knowledgeable and useful to the basketball world regarding the strategic management process of the basketball team management process. The developed model outlines critical areas for development, offering a strategic roadmap for elevating the professional management of elite basketball teams. The model for development basketball management in the next decade consisting of Planning has 17 development issues, and organizing, of which there are 22 models. Implementing has a total of 24 variables. Controlling has a total of 18 variables.

Recommendation

In this research, the researcher has suggestions for using the results of the study to develop and improve the strategic administration and management style of basketball teams in the next decade to be more efficient as follows: policy aspect top executives of organizations should use the details of

basketball team management styles for the next decade obtained from this research, each detail of each aspect and every factor of the four future strategic management factors.

The four aspects of strategic management in the future, consisting of basketball team management, planning, organization, implementation, and control, should be given importance and used to improve and develop the management of the basketball team. football in the next decade to operate efficiently in line with today's actual religion that is constantly changing, which will help the organizations that carry out this research to achieve their goals. In the next order.
